

Digital Ayurveda Platform

Bridging Ancient Wisdom with Modern Technology

Company Overview: CÕRA Labs

At CORA Labs, we design and build cloud-oriented, reliable software that removes friction from daily tasks and business operations. Our mission is to turn complexity into clarity-developing secure, scalable, and intuitive solutions that empower people and organizations to do more with less effort.

Vision

To create a world where technology works quietly and reliably in the background, making everyday life simpler, more connected, and more human.

Team Focus

A specialized team driving innovation across development, design, and traditional research integration.

Core Team Roles

-  **Ridma Jayawardena – Project Leader**
-  **Hasala Kalubowila – Chief Technical Officer**
-  **Charith Dhananjaya – UI/UX Engineer**
-  **Iwanthi Abeysinghe – AI/ML Engineer**
-  **Sachith Nissanka – Senior Software Engineer**

Identified Problems in the Ayurvedic Domain

Traditional Ayurvedic practice currently faces several critical barriers to modern efficiency and education.

-  **Lack of E-Channeling Systems**
There is no established, unified digital system for booking appointments with Ayurvedic doctors and clinics, leading to administrative overhead and patient frustration.
-  **Complex Medicine Ordering**
Ordering raw Ayurvedic medicines is difficult for doctors and clinics, involving extensive formalities and lacking efficient, direct online delivery platforms.
-  **Inaccessible Educational Resources**
Ayurvedic undergraduates lack a proper web/app platform for accessing centralized, verified learning materials and educational support.
-  **Language Barrier for Local Students**
Most educational documentation is not readily available in Sinhala, significantly hindering the study and comprehension for local Sri Lankan students.

Our Proposed **Solution: A Digital Ecosystem**

We are creating a comprehensive platform that integrates healthcare, supply chain, and education for the Ayurvedic sector.

E-Channeling Application

Patients can seamlessly book Ayurvedic doctor appointments, view detailed profiles, check specialties, and monitor clinic availability in real-time.

Medicine Delivery System

Enables doctors and clinics to efficiently order raw Ayurvedic medicines online, simplifying bureaucracy and accelerating the procurement process.

Educational AI Assistant

A specialized chatbot for Ayurvedic undergraduates, providing instant answers to study queries and supporting critical Sinhala translation of key resources.

Main Components of the System

The platform is designed around three distinct user experiences to maximize utility and reach across the Ayurvedic community.

Mobile App (Patients)

Primary interface for E-channeling, secure appointment scheduling, tracking consultation history, and accessing health records.

Web/App (Doctors & Clinics)

Dedicated portal for raw medicine ordering, secure supply management, inventory tracking, and managing patient schedules.

AI Chatbot (Students)

Intelligent educational support, acting as a virtual study partner, providing instant access to information, and offering vital Sinhala translation capabilities.

Key Expected Benefits for Stakeholders

Our platform delivers tangible improvements across accessibility, efficiency, and educational support within the Ayurvedic ecosystem.

- **Improved Accessibility:** Increases the ease with which patients can connect with qualified Ayurvedic healthcare professionals.
- **Supply Chain Efficiency:** Drastically reduces the time and bureaucratic formalities required for clinics to order essential raw medicines.
- **Educational Empowerment:** Provides local students with essential learning resources, specifically breaking down language barriers with Sinhala support.
- **Digital Promotion:** Acts as a catalyst for the overall digitalization and modernization of traditional medicine fields.

Future Enhancements: Scaling Our **Impact**

Our roadmap includes strategic expansions to fully integrate and monetize the platform, ensuring long-term sustainability and value.

1

Integrated Payments & Consultations

Develop seamless online payment processing and secure video consultation features directly within the platform.

2

Verified Product Marketplace

Build a robust marketplace for verified, high-quality Ayurvedic products, connecting trusted sellers directly with consumers.

3

Global Language Support

Expand multi-language support beyond Sinhala to include international languages, broadening our user base.

4

Strategic Collaborations

Formalize partnerships with Ayurvedic universities and major hospitals to ensure data accuracy, resource quality, and clinical integration.

Conclusion: A Unified Digital Ayurveda Platform

Our project is the cornerstone for creating a cohesive and efficient digital future for Ayurveda.

CÔRA Labs aims to create a unified digital Ayurveda Platform for connecting patients, doctors, and students through technology, making Ayurvedic knowledge and services **accessible, efficient, and inclusive** for all.
